

What if safety didn't come from the network... but from identity itself?

💡 Kids are either overexposed... or over-controlled.
Parents are forced to choose between safety and trust.

Most tools either spy... or fail.

🔧 SIGEAR replaces the model.

💡 IDEA

Each user has a secure identity (NTI),
paired with an adaptive digital companion that:

- understands who they are
- applies what's appropriate
- guides what happens next

⚙️ SYSTEM

Designed to grow with the user

- Works at home
- Works anywhere
- Stays consistent everywhere

🔒 DIFFERENCE

Nothing is exposed. Only decisions are shared.

- No passwords
- No data sharing
- No surveillance

💡 This isn't control... It's understanding.
